0	Introduction	9
0.1	Notation	9
1	Overview	13
2	Lifting in $W^{1,p}$	15
2.0	Introduction	15
2.1	Warm up. Lifting of continuous maps: local and global aspects	17
2.2	Lifting of S^1 -valued maps in $W^{1,p}$. Definition of Ju	22
2.3	Lifting of S^1 -valued maps in $W^{1,1}$ and BV	32
2.3.1	BV maps	32
2.3.2	$W^{1,1}$ maps. Optimal liftings. Definition of $\Sigma(u)$	35
2.4	$\Sigma(u)$ computed via duality: the basic relation between $\Sigma(u)$ and Ju	44
2.5	Relaxed energy	50
2.6	The least energy with prescribed Jacobian	52
2.7	Maps on $\partial\Omega$	53
2.8	Complements and open problems	54
2.8.1	Optimal liftings of BV maps (following Ignat)	54
2.8.2	Duality and density revisited	54
2.8.3	Lifting etc. with boundary condition	57
2.8.4	Open problems	59
2.9	Comments	60
3	Geometrical interpretation of Ju and $\Sigma(u)$ in 2D; topological singularities and minimal connections	63
3.0	Introduction	63
3.1	Ju as a sum of Dirac masses	67
3.2	M -connections and optimal liftings	70
3.3	$L(a, d)$ computed by duality	73
3.4	Connections associated with (a, d) . Minimal connections	80

3.5	Returning to u . Proof of Theorem 3.14	84
3.6	About $z/ z $	88
3.6.1	$\Omega = \mathbb{D}$ and $u(z) = z/ z $	89
3.7	Least $W^{1,1}$ energy maps with prescribed singularities. Do they exist?	92
3.7.1	The value of the least energy	93
3.7.2	Minimization with one singularity	93
3.7.3	Minimization with multiple singularities	95
3.8	The structure of Ju for a general $u \in W^{1,1}$	95
3.8.1	Ju is an infinite sum of Dirac masses. And conversely	95
3.8.2	Connections and minimal connections revisited	97
3.8.3	A pathological case	98
3.9	An integral representation of the distribution Ju	99
3.10	The case where Ju is a measure	103
3.11	The dipole construction and some applications	103
3.11.1	The dipole construction	104
3.11.2	Proof of (3.143)	104
3.11.3	Proof of (3.144)	105
3.12	Coarea formula and applications	105
3.12.1	Proof of $\int_{\Omega} \nabla u \geq 2\pi L(T)$ via the coarea formula	105
3.12.2	Back to the minimization of the energy with prescribed singularities	107
3.13	Complements and open problems	108
3.13.1	Jacobians of maps with higher regularity (following Bousquet)	108
3.13.2	Micromagnetism and \mathbb{S}^1 -valued maps	109
3.13.3	Open problems	109
3.14	Comments	110
4	The geometry of Ju in 3D (and higher); curves of singularities and minimal surfaces	113
4.0	Introduction	113
4.1	Examples	113
4.2	$\Sigma(u)$ and minimal surfaces	116
4.3	The dipole construction	118
4.4	A geometrical consequence of Theorem 4.6	119
4.5	The structure of Ju for a general $u \in W^{1,1}$ and arbitrary $N \geq 3$. Correspondence between optimal liftings and minimal surfaces	121
4.6	An integral representation of Ju	122
4.7	Rectifiability	122
4.8	The $L^{N/(N-1)}$ -distance of $u \wedge \nabla u$ to gradients	122
4.9	Complements and open problems	124
4.9.1	Jacobian of maps with higher regularity	124

4.9.2	Open problems	124
4.10	Comments	125
5	A digression: sphere-valued maps	127
5.1	Least energy with prescribed Jacobian	127
5.2	Relaxed energy	132
5.3	Complements and open problems	136
5.3.1	Open Problems	136
5.4	Comments	137
6	Lifting in fractional Sobolev spaces and in VMO	139
6.0	Temporary introduction	139
6.1	Lifting of S^1 -valued maps in fractional Sobolev spaces	139
6.1.1	Case 1: $N = 1$	141
6.1.2	Case 2: $N \geq 2, 0 < s < 1$	145
6.1.3	Case 3: $N \geq 2, s \geq 1$	148
6.2	Lifting of S^1 -valued maps in VMO and BMO	149
6.3	Complement: Lifting in covering spaces (following Bethuel and Chiron)	153
6.4	Comments and open problems	154
7	Uniqueness of lifting	157
7.0	Introduction	157
7.1	Measurable functions with values into \mathbb{Z}	157
7.2	Sums	162
7.3	Complement: Another look at Sobolev and BV spaces	166
7.3.1	The BBM formula	166
7.3.2	Γ -convergence of the BBM functionals	169
7.3.3	Further nonlocal functionals converging to the Sobolev and BV norms	171
7.4	Comments and open problems	173
8	Factorization	177
8.1	Introduction	177
8.2	Proof of Theorem 8.1	178
8.2.1	Outline	178
8.2.2	Preliminary step: Reduction to the case $0 < s < 1$	179
8.2.3	First step: Properties of φ_1 and v_1	179
8.2.4	Second step: Construction and properties of φ_2 and v_2	185
8.2.5	Third step: Decomposition of φ_2	187
8.3	Comments	189
8.4	Open problem	190

9	Applications of the factorization	191
9.0	Introduction	191
9.1	Existence of Ju for u in $W^{1/p,p}$	191
9.2	Minimal energy with prescribed Jacobian	193
9.3	Relaxed energy	194
9.4	Lifting revisited	195
9.4.1	What we already know	195
9.4.2	The new results	196
9.4.3	Proof of Theorems 9.17 and 9.18	197
9.4.4	Where $Ju = 0$ enters	197
9.4.5	Where VMO enters	198
9.5	Square root	199
9.6	Complements and open problems	200
9.6.1	Prescribing the Jacobian	200
9.6.2	Sphere-valued maps	201
9.6.3	Open problems	201
9.7	Comments	202
10	Estimates of phases: positive and negative results	203
10.1	Introduction	203
10.2	Piece 3	203
10.3	Some examples of lifting without estimate	206
10.4	Prefactorization estimates	206
10.5	Postfactorization estimates	206
10.6	Estimates à la Bourgain-Nguyen	207
10.7	Comments and open problems	207
11	Density	209
11.0	Introduction	209
11.1	Density when we ask a.e. convergence	209
11.2	When are smooth maps dense?	209
11.3	What can be done in case of non density	210
11.4	Weak density	211
11.5	Distance to smooth maps	211
11.6	Comments	211
12	Traces	213
12.1	The extension problem for \mathbb{S}^1 -valued maps	213
12.2	A precised form of the extension problem...	216
12.3	Comments	217
13	Degree	219
13.1	Degree	219
13.2	Degree for $H^{1/2}$ maps	226
13.3	Degree and Fourier coefficients. Can one hear the degree?	239

13.4	New estimates for the degree	249
13.5	Invariants	250
13.5.1	<i>VMO</i> maps	250
13.6	Complements	252
13.6.1	Nguyen $\sqrt{2} \mapsto \sqrt{3}$	252
13.6.2	Nguyen related works	253
14	Domains with topology	255
15	Homotopy classes	257
15.1	Comments	258
16	Gaps	259
16.1	Gap	259
16.2	Comments	259
17	Dirichlet problems	261
17.1	Regularity	261
17.2	Singularities	261
17.3	Antigap	261
17.4	Problems with infinite energy	262
17.5	Problems with prescribed singularities	262
18	Open problems. Further directions	263
18.1	Open problems for the inner circle	264
18.1.1	Further directions	265
19	Appendices	267
19.1	Sobolev spaces	267
19.2	Sobolev and Gagliardo-Nirenberg embeddings	269
19.3	Composition in Sobolev spaces	280
19.4	Standard examples of maps in Sobolev spaces	282
19.5	<i>VMO</i> maps	287
19.6	Counterexamples	290
19.7	Fine theory of <i>BV</i> maps	294
19.8	Description of (minimal) connections in 2D	303
19.8.1	<i>M</i> -connections and irreducible representations	303
19.8.2	Structure of connections	303
19.8.3	<i>M</i> =minimal	304
19.9	Geometric measure theory tools and applications	304
19.10	About $z/ z $	307
19.10.1	$\Omega = \mathbb{D}$	307
19.10.2	Ω is arbitrary	312
19.11	A pathological case	314
19.12	Jacobians of $W^{1,p}(\Omega; \mathbb{S}^1)$ maps	317
19.13	Littlewood-Paley theory and applications	319

19.14	Products in fractional Sobolev spaces.....	324
19.15	Estimates for extensions by regularization.....	327
19.16	A sum-intersection property of Sobolev spaces.....	333
20	Material to be rearranged	339
20.0	Former Piece 2	339
