Corrections to “Lecures on Motivic Cohomology”
by C. Mazza, V. Voevodsky and C. Weibel
Clay Monographs in Math. 2, AMS, 2006

These are the corrections we are aware of.

p.5, Lemma 1.7: Y must be normal, in order to cite 1.6.

p.16, line 8: (X × should be (X_1 ×

p.17, 2nd to last line in the proof of 2.16: (1 × i_0) and (1 × i_1) should be (i_0 × 1) and (i_1 × 1).

p.18, Figure 2.1: it is correct as is, but would look better if it were flipped about a horizontal axis.

p.23 line -2: ‘presheaves with transfers:’ should be ‘presheaves:’

p.26 line -12: 'exercise 1.13' should be 'Example 2.4' [since O^*(X) ⊂ k(X)^*]

p.27 Corollary 4.8: The hypothesis 1/l ∈ k should be added

p.28 line -2: ‘ffp’ should be ‘fppf’

p.33 line -3: t_E̸= 0 should be t_E = 0

p.45 lines 4, 7: H^i should be H^i_{et} twice

p.57 line -15: complexes of additive presheaves

p.58 line 14: ')G̸= 0' should be ')G(l)̸= 0'

p.61 line 17: this complex is cohomologically bounded above

p.70 line 15: C_2(F) should be C_2(F)(X)

p.205 add reference:

Thanks go to: J. Ayoub, M. Severitt, T. Geisser, C. Haesemeyer, S. Myung, T. Keller, B. Calmès and all the students at SWISK 2007.
