"QUIZ" for Lecture 22

NAME: (print!) Oron Kress-Santilippo Section: 22

E-MAIL SCANNED .pdf OF COMPLETED QUIZ to DrZcalc3@gmail.com (Attachment: q22FirstLast.pdf) ASAP BUT NO LATER THAN Nov. 16, 8:00pm

Evaluate the surface integral $\int \int_S \mathbf{F} \cdot d\mathbf{S}$ for the given vector field \mathbf{F} and oriented surface S.

$$\mathbf{F}(x,y,z) = \langle xy, yz, zx \rangle \quad ,$$

and S is the part of the paraboloid $z=1-x^2-y^2$ that lies above the square $0 \le x \le 1$, $0 \le y \le 1$ and has upward orientation.

$$P = xy Q = yz R = 2x$$

$$= \iint \left(-\frac{29}{3x} - Q \frac{39}{3y} + R\right) dA$$

$$= \iint \left(-xy(-2x) - (yz)(-2y) + 2x\right) dA$$

$$\int \int_{0}^{1} \left(+ \lambda x^{2} y + \lambda y^{2} z + x z \right) dA = \int \left(\lambda x^{2} y + \left(1 - x^{2} - y^{2} \right) dy^{2} + x \right) dA$$

$$= \int \int \int_{0}^{1} dx dy + \left(1 - x^{2} y^{2} \right) \left(\lambda y^{2} + x \right) dx dy$$

$$\int \int \int \int dx dy + \left(1 - x^{2} y^{2} \right) \left(\lambda y^{2} + x \right) dx dy$$

$$\int \int \int \int dx dy + \left(1 - x^{2} y^{2} \right) \left(\lambda y^{2} + x \right) dx dy$$

$$\int \int \int \int dx dy + \left(1 - x^{2} y^{2} \right) \left(\lambda y^{2} + x \right) dx dy$$

$$=\frac{83}{180}$$
