

"QUIZ" for Lecture 25

NAME: (print!) Jennifer Gonzalez Section: 23

E-MAIL SCANNED .pdf OF COMPLETED QUIZ to DrZcalc3@gmail.com (Attachment: q25FirstLast.pdf) ASAP BUT NO LATER THAN Dec.8,2020, 8:00pm

Let

$$F(x, y, z) = \langle \cos(\sqrt{1+x^7+zy^9}), \tan(x^7+y^2+1/z), \tan^{-1}(e^{xyz} + \cos^6(x^8-y+3z)) \rangle,$$

and let $\langle P, Q, R \rangle = \text{curl } \mathbf{F}$. Compute

$$\frac{\partial P}{\partial x} + \frac{\partial Q}{\partial y} + \frac{\partial R}{\partial z}.$$

Be sure to explain everything.

This is the formula for the divergence. You are asking us to compute the divergence of the curl (as stated in the question, $\langle P, Q, R \rangle = \text{curl } \mathbf{F}$), therefore the answer is 0. the divergence of curl is 0.

2. Calculate the surface integral

$\iint_S \mathbf{F} \cdot d\mathbf{S}$, where

$$\mathbf{F}(x, y, z) = \langle 2x + y + z, x + 2y + z, x + y + 2z \rangle$$

where S is the surface of the box bounded by the planes $x = 0, x = 1, y = 0, y = 4, z = 0, z = 5$.

$$\frac{\partial F_1}{\partial x} = 2 \quad \frac{\partial F_2}{\partial y} = 2 \quad \frac{\partial F_3}{\partial z} = 2 \quad 2+2+2 = 6$$

$$\int_0^1 \int_0^4 \int_0^5 6 \, dz \, dy \, dx$$

$$\int_0^5 6 \, dz = 6z \Big|_0^5 = 30$$

$$\int_0^4 30 \, dy = 30y \Big|_0^4 = 120$$

$$\int_0^1 120 \, dx = 120x \Big|_0^1 = \boxed{120}$$
