Lots and Lots of Anomalous Cancellations

By Shalosh B. Ekhad

In this book, you will find listed all the anomalous cancellation where the

denominator has up to , 4, digits

and one digit in the numerator and one in the denominator, that must be the same, gets cancelled, and you still get something correct

Chapter 1 : The denominator has 2 digits

Section 1

All the Anomalous Cancellations with the denominator with, 2,

digits, and where the , 1, -th digit of the numerator

is cancelled out with the, 0, -th digit of the denominator

denominator= 26

$$\frac{65}{26} = \frac{5}{2}$$

Section 2

All the Anomalous Cancellations with the denominator with, 2,

digits, and where the , 1, -th digit of the numerator

is cancelled out with the, 1, -th digit of the denominator
