

## Solutions to the Attendance Quiz # 16 for Dr. Z.'s Number Theory Class

1. For the following primes  $p$  and  $q$  (let  $n = pq$ ) public key  $e$ , and encrypted message  $c$

(i) Check that  $e$  is an OK key, i.e. that it is coprime to  $\phi(n)$ .

(ii) Find the deciphering key,  $d$ , such that  $de \equiv 1 \pmod{\phi(n)}$

(iii) Suppose Alice sent you the encrypted message  $c$ . Check that this is an OK message (coprime to  $n$ ), and if it is find her original message?,  $m$

$$p = 5 \quad , \quad q = 7 \quad , \quad e = 5 \quad , \quad c = 9 \quad .$$

**Sol. to 1.:** (i)  $n = 5 \cdot 7 = 35$ ,  $\phi(35) = (5 - 1)(7 - 1) = (4)(6) = 24$ . Since  $\gcd(5, 24) = 1$  it is an OK key.

(ii)  $d = [5^{-1}]_{24} = 5$  (since  $5 \cdot 5 = 25 \equiv 1 \pmod{24}$ ).

(iii)  $\gcd(9, 35) = 1$  (since  $9 = 3^2$  and  $35 = 5 \cdot 7$  so they don't share primes, in real life you would need to use the Euclidean algorithm, but here we can take shortcuts).

The original message  $m$  is  $c^d \pmod{n}$ , so

$$m = 9^5 \pmod{35} \quad .$$

$$9^1 \text{ modulo } 35 = 9$$

$$9^2 \text{ modulo } 35 = 81 \text{ modulo } 35 = 11 \quad ,$$

$$9^4 \text{ modulo } 35 = 11^2 \text{ modulo } 35 = 121 \text{ modulo } 35 = 16 \quad .$$

So

$$9^5 \text{ modulo } 35 = 9^1 \cdot 9^4 \text{ modulo } 35 = 9 \cdot 16 \text{ modulo } 35 = 144 \text{ modulo } 35 = 4 \quad .$$

**Ans. to 1(iii):** The original 'message' was 4.
