

**Difficulty guide for worksheet:**

<i>C-level or B-level exam problem:</i>	1
<i>A-level exam problem or challenge for extra study:</i>	2, 3, 4
<i>beyond the scope and/or removed from syllabus:</i>	none

- Let  $\mathcal{D}$  be the parallelogram in the  $xy$ -plane with vertices  $(0, 0)$ ,  $(-2, 5)$ ,  $(1, 7)$ , and  $(-1, 12)$ .
  - Find a linear mapping  $G$  that maps  $[0, 1] \times [0, 1]$  in the  $uv$ -plane onto  $\mathcal{D}$ .
  - Use a change of variables to evaluate  $\iint_{\mathcal{D}} y^2 dA$ .
- Let  $G(u, v) = \left( \frac{u}{v+1}, \frac{uv}{v+1} \right)$ .
  - Describe the image, in the  $xy$ -plane, of the vertical line  $u = c$ .
  - Describe the image, in the  $xy$ -plane, of the horizontal line  $v = c$ .
  - Calculate  $\text{Jac}(G)$  as a function of  $u$  and  $v$ .
  - Calculate  $G^{-1}(x, y)$ .
  - Let  $\mathcal{D}$  be the region in the  $xy$ -plane bounded by the lines  $x + y = 3$ ,  $x + y = 6$ ,  $y = x$ , and  $y = 2x$ . Find a rectangle  $\mathcal{R}$  in the  $uv$ -plane such that  $G(\mathcal{R}) = \mathcal{D}$ .
  - Use the mapping  $G$  to calculate the integral  $\iint_{\mathcal{D}} (x + y) dA$ .
- Let  $G(u, v) = (u - uv, uv)$ .
  - Describe the image, in the  $xy$ -plane, of the vertical line  $u = c$ .
  - Describe the image, in the  $xy$ -plane, of the horizontal line  $v = c$ . (Be careful to consider the the case  $c = 1$  separately. Why?)
  - Compute the Jacobian of  $G$ .
  - Let  $\mathcal{D}$  be the quadrilateral in the  $xy$ -plane with vertices  $(a, 0)$ ,  $(b, 0)$ ,  $(0, a)$ , and  $(0, b)$  with  $0 < a < b$ . Find a rectangle  $\mathcal{R}$  in the  $uv$ -plane such that  $G(\mathcal{R}) = \mathcal{D}$ .
  - Elementary geometry shows that the area of  $\mathcal{D}$  is  $\frac{1}{2}(b^2 - a^2)$ . Use the mapping  $G$  and an appropriate integral to verify this formula.
  - Use the mapping  $G$  to calculate  $\iint_{\mathcal{D}} xy dA$ .
- Consider the mapping  $G(u, v) = (u^2 - v^2, 2uv)$ . Let  $\mathcal{T}$  be the triangular region in the  $uv$ -plane given by  $0 \leq v \leq u \leq 2$ , and put  $\mathcal{D} = G(\mathcal{T})$ .
  - Sketch the region  $\mathcal{D}$  in the  $xy$ -plane. What is the image, in the  $xy$ -plane, of each boundary curve of  $\mathcal{T}$ ?
  - Use the mapping  $G$  to calculate  $\iint_{\mathcal{D}} \sqrt{x^2 + y^2} dA$ .
