## Modified Growth Diagrams and the BWX Map $\phi^*$

Jonathan Bloom

Dartmouth College

June, 2011

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 の�?

# Definition of the BWX map $\phi^{\ast}$

First we define the (intermediate) map

$$\phi: S_n \to S_n$$

which is implicitly dependent on some fixed k > 2.

# Definition of the BWX map $\phi^{\ast}$

First we define the (intermediate) map

$$\phi: S_n \to S_n$$

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 の�?

which is implicitly dependent on some fixed k > 2.

For any  $\sigma \in S_n$ 

### Definition of the BWX map $\phi^*$

First we define the (intermediate) map

$$\phi: S_n \to S_n$$

which is implicitly dependent on some fixed k > 2.

For any  $\sigma \in S_n$ 

1. Order the  $k \dots 1$ -patterns  $\sigma_{i_1} \dots \sigma_{i_k}$  in  $\sigma$  lexicographically (according to the  $\sigma_j$ 's, not the j's)

### Definition of the BWX map $\phi^*$

First we define the (intermediate) map

$$\phi: S_n \to S_n$$

which is implicitly dependent on some fixed k > 2.

For any  $\sigma \in S_n$ 

- 1. Order the  $k \dots 1$ -patterns  $\sigma_{i_1} \dots \sigma_{i_k}$  in  $\sigma$  lexicographically (according to the  $\sigma_j$ 's, not the j's)
- 2. Let  $\phi(\sigma)$  be obtained from  $\sigma$  by taking the smallest  $k \dots 1$ -pattern

$$\sigma_{i_1}\sigma_{i_2}\ldots\sigma_{i_k}$$

# Definition of the BWX map $\phi^{*}$

First we define the (intermediate) map

$$\phi: S_n \to S_n$$

which is implicitly dependent on some fixed k > 2.

For any  $\sigma \in S_n$ 

- 1. Order the  $k \dots 1$ -patterns  $\sigma_{i_1} \dots \sigma_{i_k}$  in  $\sigma$  lexicographically (according to the  $\sigma_j$ 's, not the j's)
- 2. Let  $\phi(\sigma)$  be obtained from  $\sigma$  by taking the smallest  $k \dots 1$ -pattern

$$\sigma_{i_1}\sigma_{i_2}\ldots\sigma_{i_k}$$

and placing in positions  $i_1 \dots i_k$  the values

$$\sigma_{i_2}\ldots\sigma_{i_k}\sigma_{i_1},$$

respectively, and leaving all other entries of  $\sigma$  fixed.

# Definition of the BWX map $\phi^*$

Now the map of interest

$$\phi^*: S_n \to S_n(k \dots 1)$$

#### Definition of the BWX map $\phi^*$

Now the map of interest

$$\phi^*: S_n \to S_n(k \dots 1)$$

is given by

$$\sigma \longmapsto \phi^{m}(\sigma)$$

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ □臣 = のへで

for some *m* (depending on  $\sigma$ ) such that  $\phi^{m+1}(\sigma) = \phi^m(\sigma)$ .

### Definition of the BWX map $\phi^{*}$

Now the map of interest

$$\phi^*: S_n \to S_n(k \dots 1)$$

is given by

$$\sigma \longmapsto \phi^{m}(\sigma)$$

for some *m* (depending on  $\sigma$ ) such that  $\phi^{m+1}(\sigma) = \phi^m(\sigma)$ .

In other words,  $\phi^*$  is obtained by repeatedly applying the map  $\phi$  until no  $k \dots 1$ -pattern remains.

Let k = 3. For  $\sigma = 45312$  we obtain  $\phi^*(\sigma)$  as follows:

◆□ ▶ < 圖 ▶ < 圖 ▶ < 圖 ▶ < 圖 • 의 Q @</p>

  - Provides alternative proofs of the results by BWX and by Bousquet-Mélou and Steingrímsson.
- In this paper Krattenthaler asks (Problem # 4) whether the map φ<sup>\*</sup> and growth diagrams are at all related.

We answer both Krattenthaler and Bousquet-Mélou and Steingrímsson's questions by providing a reformulation of  $\phi^*$  in terms of growth diagrams that makes the commutation result obvious.

We will work in this context since this is the context in which Bousquet-Mélou and Steingrímsson and Krattenthaler worked.

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 の�?

We will work in this context since this is the context in which Bousquet-Mélou and Steingrímsson and Krattenthaler worked.

**Definition (Informal):** A Ferrers Board F is an array of squares obtained by removing some "northeast chunk" from the  $n \times n$  array of squares leaving a staircase shape.

We will work in this context since this is the context in which Bousquet-Mélou and Steingrímsson and Krattenthaler worked.

**Definition (Informal):** A Ferrers Board F is an array of squares obtained by removing some "northeast chunk" from the  $n \times n$  array of squares leaving a staircase shape.

**Definition:** A rook placement P on a Ferrers Board F is a subset of F that contains at most one square from each row and column of F. (We indicate the squares in a placement by dots.)

We will work in this context since this is the context in which Bousquet-Mélou and Steingrímsson and Krattenthaler worked.

#### Motivation for the Reformulation of $\phi^*$

Consider the Schensted correspondence:

$$\pi = \begin{pmatrix} 1 & 2 & 6 & 7 & 8 \\ 4 & 5 & 3 & 1 & 2 \end{pmatrix}$$

$$P = \begin{array}{c} 1 & 2 \\ 3 & 5 \end{array} \qquad \qquad Q = \begin{array}{c} 1 & 2 \\ 6 & 8 \\ 7 \end{array}$$

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 のへぐ

### Motivation for the Reformulation of $\phi^*$

Consider the Schensted correspondence:

**Definition:** The shape of *P* and *Q* is the partition  $(\lambda_1 \lambda_2 \dots \lambda_t)$  such that the top row of *P* and *Q* have  $\lambda_1$  entries, the second row has  $\lambda_2$  entries, and so on.

In our example the shape is (221).

## Motivation for the Reformulation of $\phi^*$

Consider the Schensted correspondence:

**Definition:** The shape of *P* and *Q* is the partition  $(\lambda_1 \lambda_2 \dots \lambda_t)$  such that the top row of *P* and *Q* have  $\lambda_1$  entries, the second row has  $\lambda_2$  entries, and so on.

In our example the shape is (221).

**Theorem:** The length of the longest decreasing subsequence in  $\pi$  is *t*.

• Here the subsequence 431 is longest and t = 3.

Given a placement P on a Ferrers board F a growth diagram assign partitions to all the corners of all the squares in F in the following way:

▲ロト ▲帰ト ▲ヨト ▲ヨト 三日 - の々ぐ

Given a placement P on a Ferrers board F a growth diagram assign partitions to all the corners of all the squares in F in the following way:

 $\blacktriangleright$  Start by assigning the empty partition  $\emptyset$  on the left and bottom

To determine the partitions on the other corners we use the following rules:

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

Given partitions

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 のへぐ

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

◆□▶ ◆□▶ ◆豆▶ ◆豆▶ ̄豆 \_\_\_\_のへぐ

◆□▶ ◆□▶ ◆三▶ ◆三▶ ○○○

# An Example

◆□▶ ◆圖▶ ◆臣▶ ◆臣▶ 臣 ∽��?

### An Example

◆□ > ◆□ > ◆豆 > ◆豆 > ̄豆 = のへで

## An Example

**Theorem:** Each partition is the shape of the recording/insertion tableaux corresponding to the partial permutation southwest of the partition's location.

### The Example Continued

(4日) (個) (目) (目) (目) (の)()

### The Example Continued

▲□▶ ▲圖▶ ▲臣▶ ▲臣▶ ―臣 … のへで

## The Example Continued

**Theorem:** Since each step in the Growth Diagram Algorithm (GDA) is reversible then

 $seq(P,F) := (\emptyset, 1, 2, 3, 2, 3, 4, 3, 31, 21, 211, 221, 211, 21, 2, 1, \emptyset)$ 

completely determines the placement P.

### Our Reformulation of $\phi^{\ast}$

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 三臣 - のへで

Modified Rule for  $GDA_k...$ 

\*if last rule rule makes  $|NE| \ge k$  then

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ □臣 = のへで

\*if last rule rule makes  $|NE| \ge k$  then

► As the partitions correspond to the shape of the recording/insertion tableaux the modified rule effectively "removes" decreasing subsequence with length ≥ k from our placement P.

 $GDA_3$  on (P, F) GDA on  $(\phi^*(P), F)$ 

▲□▶ ▲圖▶ ▲臣▶ ▲臣▶ ―臣 … のへで

 $GDA_3$  on (P, F) GDA on  $(\phi^*(P), F)$ 

Main Theorem: For any rook placement P on a Ferrers board F,

 $seq_k(P,F) = seq(\phi^*(P),F)$ 

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

**Definition:** For any rook placement P on F, the inverse P' of P is the placement on the conjugate board F' obtained by reflecting F and all the markers for P across the SW-NE diagonal.

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

**Definition:** For any rook placement P on F, the inverse P' of P is the placement on the conjugate board F' obtained by reflecting F and all the markers for P across the SW-NE diagonal.

Note: seq(P', F) = rev(seq(P, F))

**Definition:** For any rook placement P on F, the inverse P' of P is the placement on the conjugate board F' obtained by reflecting F and all the markers for P across the SW-NE diagonal.

**Note:** seq(P', F) = rev(seq(P, F))

**Corollary:** For any rook placement P on a Ferrers board F,

 $\phi^*(P') = (\phi^*(P))'$
**Definition:** For any rook placement P on F, the inverse P' of P is the placement on the conjugate board F' obtained by reflecting F and all the markers for P across the SW-NE diagonal.

Note: seq(P', F) = rev(seq(P, F))

**Corollary:** For any rook placement P on a Ferrers board F,

$$\phi^*(P') = (\phi^*(P))'$$

Proof. By the Main Theorem and the note above we have:

$$seq(\phi^*(P'),F) = seq_k(P',F)$$

**Definition:** For any rook placement P on F, the inverse P' of P is the placement on the conjugate board F' obtained by reflecting F and all the markers for P across the SW-NE diagonal.

Note: seq(P', F) = rev(seq(P, F))

**Corollary:** For any rook placement P on a Ferrers board F,

$$\phi^*(P') = (\phi^*(P))'$$

Proof. By the Main Theorem and the note above we have:

$$seq(\phi^*(P'),F) = seq_k(P',F)$$
  
= rev(seq\_k(P,F))

**Definition:** For any rook placement P on F, the inverse P' of P is the placement on the conjugate board F' obtained by reflecting F and all the markers for P across the SW-NE diagonal.

Note: seq(P', F) = rev(seq(P, F))

**Corollary:** For any rook placement P on a Ferrers board F,

$$\phi^*(P') = (\phi^*(P))'$$

Proof. By the Main Theorem and the note above we have:

$$seq(\phi^*(P'), F) = seq_k(P', F)$$
  
=  $rev(seq_k(P, F))$   
=  $rev(seq(\phi^*(P), F))$ 

**Definition:** For any rook placement P on F, the inverse P' of P is the placement on the conjugate board F' obtained by reflecting F and all the markers for P across the SW-NE diagonal.

Note: seq(P', F) = rev(seq(P, F))

**Corollary:** For any rook placement P on a Ferrers board F,

$$\phi^*(P') = (\phi^*(P))'$$

Proof. By the Main Theorem and the note above we have:

$$seq(\phi^*(P'),F) = seq_k(P',F)$$
  
=  $rev(seq_k(P,F))$   
=  $rev(seq(\phi^*(P),F))$   
=  $seq((\phi^*(P))',F)$ 

**Definition:** For any rook placement P on F, the inverse P' of P is the placement on the conjugate board F' obtained by reflecting F and all the markers for P across the SW-NE diagonal.

Note: seq(P', F) = rev(seq(P, F))

**Corollary:** For any rook placement P on a Ferrers board F,

$$\phi^*(P') = (\phi^*(P))'$$

Proof. By the Main Theorem and the note above we have:

$$seq(\phi^*(P'), F) = seq_k(P', F)$$
  
=  $rev(seq_k(P, F))$   
=  $rev(seq(\phi^*(P), F))$   
=  $seq((\phi^*(P))', F)$ 

Hence we conclude that  $\phi^*(P') = (\phi^*(P))'$ .
