Turn in starred problems Tuesday $2 / 14 / 2017$.
Section 23.2: 1. (a), (b), (d), (f)*, 3 (b), (c), (f), 5. (b)*
Section 23.3: 1, 2, 4 (d), (f)*, (h), (k)*, (l)*, 5, $7^{*}$
Note: the problems 23.3:1,2 are just thought problems to help you understand Cauchy's theorem. After that, there are a good many problems, none very hard, just so that you can practice doing these contour integrals. Use Cauchy's Theorem whenever possible (in Section 23.3, not 23.2)! For 23.3.4(f), see Example 3 in that section.
