# Contents

<b>0</b>	<b>Introduction</b>
<b>1</b>	<b>Axioms for two-dimensional conformal field theories</b>
1.1	A definition of full two-dimensional conformal field theory by Kontsevich and Segal . . . . .
1.2	Segal's notions of modular functor and weakly conformal field theory . . . . .
1.3	Axioms of Moore and Seiberg for rational conformal field theories . . . . .
1.4	A guide to the established mathematical results in Chapters 2-7 . . . . .
<b>2</b>	<b>Meromorphic conformal fields and vertex operator algebras</b>
2.1	Meromorphic conformal fields . . . . .
2.2	Vertex operator algebras and their geometry . . . . .
2.3	Modules . . . . .
2.4	Locally convex topological completions . . . . .
2.5	A construction theorem . . . . .
2.6	Examples . . . . .
2.6.1	Free bosons (Heisenberg algebras) . . . . .
2.6.2	Free bosons on tori (lattices) . . . . .
2.6.3	Wess-Zumino-Novikov-Witten models (affine Lie algebras) . . . . .
2.6.4	Minimal models (Virasoro algebra) . . . . .
<b>3</b>	<b>Operator product expansion and intertwining operator algebras</b>
3.1	Intertwining operators . . . . .
3.2	Operator product expansion for intertwining operators . . . . .
3.3	Differential equations and intertwining operators . . . . .

3.4	Intertwining operator algebras . . . . .
3.5	A construction theorem . . . . .
3.6	Examples . . . . .
3.7	Logarithmic intertwining operators and their operator product expansion . . . . .
<b>4</b>	<b>Braided tensor categories and vertex tensor categories</b>
4.1	Tensor product bifunctors . . . . .
4.2	Associativity isomorphisms . . . . .
4.3	Braidings . . . . .
4.4	Vertex tensor categories . . . . .
4.5	A construction theorem . . . . .
<b>5</b>	<b>Modular invariance</b>
5.1	Traces of products and iterates of intertwining operators . . . . .
5.2	Differential equations and the convergence of traces . . . . .
5.3	The modular invariance theorem for intertwining operators . . . . .
5.3.1	Formulation of the theorem . . . . .
5.3.2	A partial result: Zhu's theorem . . . . .
5.3.3	Sketch of the proof . . . . .
5.4	Examples . . . . .
5.5	Modular invariance theorem for logarithmic intertwining operators . . . . .
<b>6</b>	<b>Verlinde formula and modular tensor categories</b>
6.1	Verlinde formula . . . . .
6.2	Examples . . . . .
6.3	The modularity theorem . . . . .
6.3.1	Rigidity theorem . . . . .
6.3.2	Nondegeneracy and the identification of the matrix $S$ . . . . .
<b>7</b>	<b>Full and open-closed conformal field theories</b>
7.1	Conformal full field algebras . . . . .
7.2	A construction theorem . . . . .
7.3	Modular invariance for conformal full field algebras . . . . .
7.4	Open-string vertex operator algebras . . . . .
7.5	Cardy condition and open-closed conformal field theories . . . . .

**8 Open problems**

8.1	Integral forms . . . . .
8.2	Classification . . . . .
8.3	Kazhdan-Lusztig type equivalences . . . . .
8.4	Orbifold theories . . . . .
8.5	Construction of higher-genus theories . . . . .
8.6	Cohomology, deformations and the moduli space . . . . .
8.7	$N = 2$ superconformal field theories associated to Calabi-Yau manifolds . . . . .
8.8	Logarithmic conformal field theories . . . . .
8.9	Connection with operator algebra approach . . . . .

**A Formal calculus****B Riemann surfaces and several complex variables****C Differential equations with regular singular points****D Tensor categories**

D.1	Basic concepts in category theory . . . . .
D.2	Monoidal categories and tensor categories . . . . .
D.3	Symmetries and braidings . . . . .
D.4	Rigidity . . . . .
D.5	Ribbon categories and modular tensor categories . . . . .
