

1. Number of times all species survived:  $11 = 2$

Number of times ALL 3 initial conditions led to stable eq points:  $111 = 6$

(Number of initial conditions that led to stable eq points in general):  $111111111111 = 20$

2. Number of times all species survived: 0

Number of times ALL 3 initial conditions led to <sup>stable</sup> eq points:  $111 = 5$

(Number of initial conditions that led to stable eq points in general):  $11111111111 = 17$

3. # all survive: 0

# all IC  $\rightarrow$  stable eq.:  $1 = 1$

# of IC  $\rightarrow$  stable eq.:  $111 = 7$

4. # all survive: 0

# all IC  $\rightarrow$  stable eq.:  $1111 = 4$

# of IC  $\rightarrow$  stable eq.:  $111111111111111 = 15$

} very surprised to see so many successes
