1. What does A stand for in RSA?

Adleman

What other algorithm did Adleman create?

He was also part of developing the APR primality test.

2. What is the name of the person who discovered an algorithm to factorize integers using quantum computers?

Shor.

Part II

1. $10 \cdot 4 - 3 \cdot 13 = 1$

So you'll give 4 10 dollar bills and get 3 13 dollar bill exchanges for change to pay for \$1 coffee.
