Y. -F. S Petermann

[40,97,1986,2010,3,4,1]

Yves-François S. Pétermann had a PhD in Sciences from the Université de Genève in 1985. His dissertation was based on oscillations and changes of sign of error terms related to Euler's Function and to the Sum-of-Divisors Function. His interests in mathematics include analytical theory of numbers, auto described sequences, and error analysis for multiprocessing calculus. He currently resides at the Université de Genève as a professor. Some of his publications include asymptotic formulae of Ramanujan, notes on the Erdos-Graham theorem, and his first publication on the changes of sign of error terms related to Euler's function and to divisor functions.
